1. Executive Summary

About the site: Northwind ERP implements Odoo and Dynamics 365 for distributors in the UAE.

The main thing holding this site back: The site shows almost no third-party proof.

Critical	High	Medium	Low	Info
1	25	33	22	2

Score limit applied: 1 critical issue found — score capped at 70 until fixed. Calculated score before the limit: 55/100.

Key Numbers: You vs Competitors

Metric	You	Competitor median
Keywords ranking (top 30)	4	620
Keywords in top 10	1	122
Estimated monthly organic visits	12	3,401
Referring domains	9	310
Mobile PageSpeed	41	78
Domain age (years)	0.7	12.85

Fix These First

- Broken pages (4xx, 5xx or timeout)** (1 of 14 crawled pages)
Fix or 301-redirect broken URLs to the most relevant live page.
- www and non-www versions are not consolidated** (Crawler canonicalization test failed)
Make the www version redirect (301) to the main domain with a valid certificate for both hostnames.
- Slow server response (TTFB)** (Homepage server wait time 950ms (good is under 200ms))
Enable CDN/edge caching and host close to your main audience.
- Some search and AI crawlers are blocked or get less content** (ClaudeBot (403); PerplexityBot (200, 2% of content))
Check firewall, bot-protection and CDN rules so these crawlers receive the same page as browsers.
- Invalid structured data (JSON-LD will not parse)** (1 broken JSON-LD block(s) on sampled pages)
Validate the markup with Google Rich Results Test and fix syntax errors.
- Malformed sameAs profile link** (Invalid: https://twitter.com/northwind_erp)
Remove or correct the invalid entry and link only real, active profiles.
- Structured contact details are thinner than what the site shows** (Missing in schema: streetAddress, email)

Add full PostalAddress (streetAddress, addressLocality, addressRegion, postalCode, addressCountry), telephone and email to Organization schema.

2. Scorecard

Category	Score	Weight	
Crawlability & Indexing	42	15%	
On-Page	70	14%	
Content	46	16%	
Schema	43	12%	
Performance	35	13%	
Security	93	7%	
Images	88	7%	
Technical	93	6%	
AI Search Readiness	57	10%	
Authority	39	12%	

3. Competitor Benchmark

Competitors: provided by user. Country: United Arab Emirates.

Domain	Keywords	Top 10	Est. visits/mo	Traffic value \$	Ref. domains	Domain rank	PageSpeed	Age (yrs)
northwind-erp.com (you)	4	1	12	60	9	45	41	0.7
gulferp.ae	7	7	3,401	21,000	310	380	78	11.3
erpmasters.com	7	7	3,401	21,000	310	380	78	14.4

4. Keywords by Search Intent

Keyword research based on your services: heading 1, heading 2, heading 5

Current Rankings per Intent (top 30): You vs Competitors

Intent	northwind-erp.com (you)	gulferp.ae	erpmasters.com
Informational	0	1	1
Navigational	0	0	0
Commercial	4	5	5
Transactional	0	1	1

Your Current Commercial Rankings

uaebusinessdirectory.com	1
gulfnews.com	1

Findings

High The site does not rank in Google's top 10 for any keyword

Whole website

Evidence: Top-10 rankings in United Arab Emirates: northwind-erp.com 0 vs competitor median 122 (gulferp.ae, erpmasters.com)

Why it matters: Without top-10 rankings the site gets almost no organic traffic, however good the pages are.

How to fix: Build authority first (partner listings, directories, reviews, mentions) and target long-tail keywords where competitors are weak.

High Organic traffic is under 10% of competitors

Whole website

Evidence: Estimated monthly organic visits: northwind-erp.com 12 vs competitor median 3401

Why it matters: Most searchers in this market are going to competitors.

How to fix: Close the keyword and backlink gaps shown in this report.

High Very young domain competing with long-established sites

Whole website

Evidence: northwind-erp.com registered 2026-01-15 (0.7 years) vs competitor median 12.850000000000001 years

Why it matters: New domains have little accumulated trust; on-page fixes alone rarely move competitive terms in the first year.

How to fix: Invest in off-site entity building (partner directories, reviews, mentions) and target long-tail, lower-difficulty searches first.

High **Keyword gap: searches competitors win and you do not**

Whole website

Evidence: 6 keywords where competitors rank in the top 10 and you are not in the top 20. Top: "what is erp implementation" (2400/mo), "erp software dubai" (1900/mo), "erp implementation cost" (700/mo), "erp implementation services" (480/mo), "best erp for distributors uae" (260/mo)

Why it matters: Each of these is proven demand in your market that is currently going to competitors.

How to fix: Create or improve a dedicated page for the highest-volume, lowest-difficulty gap keywords first.

High **Far fewer referring domains than competitors**

Whole website

Evidence: 9 referring domains vs competitor median 310

Why it matters: Links from other websites are one of the strongest ranking signals; competitors are far ahead.

How to fix: Earn links from partner directories, industry associations, suppliers, press and guest content.

Medium **High backlink spam score**

Whole website

Evidence: Spam score 35

Why it matters: A high share of low-quality links can hold rankings back.

How to fix: Review the worst linking domains and disavow clearly manipulative ones.

Medium **Link opportunities: sites that link to competitors but not to you**

Whole website

Evidence: 3 domains. Top: clutch.co, uaebusinessdirectory.com, gulfnews.com

Why it matters: Sites that already link to your competitors are the most likely to link to you.

How to fix: Reach out to these sites with a listing request, partnership or useful resource.

Low Low-difficulty keywords you can target now

Whole website

Evidence: "erp software dubai" (1900/mo, difficulty 28), "erp implementation checklist" (720/mo, difficulty 25), "erp implementation cost" (700/mo, difficulty 28), "erp implementation dubai" (320/mo, difficulty 28), "erp implementation cost uae" (260/mo, difficulty 22)

Why it matters: These searches have real demand and weak competition, the best starting point for a young site.

How to fix: Build or optimise one focused page per keyword group, starting with the highest volume.

Low Keywords close to page 1 (positions 11-20)

Whole website

Evidence: "erp implementation dubai" #14, "odoo partner uae" #18

Why it matters: These are the fastest wins: small improvements can move them onto page 1.

How to fix: Improve the ranking page (depth, internal links, title) for each of these keywords.

Low Most links are nofollow

Whole website

Evidence: 33% of referring domains give followed links

Why it matters: Nofollow links pass little ranking value.

How to fix: Prioritise editorial links, directories and partners that give followed links.

Low Backlinks pointing to broken pages

Whole website

Evidence: 14 backlinks lead to pages that no longer exist

Why it matters: Link value is lost when links point to 404 pages.

How to fix: Redirect the old URLs to the most relevant live pages.

6. Content Quality & E-E-A-T

Trust Signals on Your Site

Named Authors	no
Case Studies	partial
Testimonials Reviews	no
Credentials Certifications	yes
Pricing Transparency	no
Team Or Leadership Info	partial
Clear Contact Details	yes

Competitors' Trust Signals

Competitor	Authors	Case studies	Testimonials	Pricing	Depth	Note
gulferp.ae	yes	yes	yes	no	deep	Publishes case studies with numbers

Findings

High Experience claim conflicts with the founding date

Whole website

Evidence: "15+ years" on <https://northwind-erp.com/> but schema foundingDate is 2021-03-01

Why it matters: Contradictory facts damage trust with buyers and with search quality systems.

How to fix: Make the claims consistent (e.g. "leadership with 15+ years of experience") or correct the founding date.

Affected pages:

<https://northwind-erp.com/>

High Articles have no named human author

2 of 14 pages (100%)

Evidence: 2 of 2 sampled articles

Why it matters: Expertise signals (E-E-A-T) depend on a real, credentialed author, especially on advice or compliance topics.

How to fix: Credit a named expert with an author page, job title and LinkedIn (author @type Person with url and sameAs).

Affected pages:

<https://northwind-erp.com/blog/odoo-vs-dynamics/>

<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

High Articles cite no external sources

2 of 14 pages (100%)

Evidence: 2 of 2 sampled articles link to no authoritative source

Why it matters: Uncited facts are less trustworthy and less likely to be quoted by Google AI Overviews, ChatGPT or Perplexity.

How to fix: Link each key fact, law or statistic to its primary source (government, standards body, vendor docs).

Affected pages:

<https://northwind-erp.com/blog/odoo-vs-dynamics/>

<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

High Experience claim contradicts founding date

Whole website

Evidence: "15+ years of experience" vs foundingDate 2021

Why it matters: Contradiction erodes trust

How to fix: Rephrase to leadership experience

Affected pages:

<https://northwind-erp.com/>

High No named authors on articles

Whole website

Evidence: Author: Northwind Team

Why it matters: E-E-A-T

How to fix: Add expert bylines

Affected pages:

<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

Medium No freshness signal on articles

2 of 14 pages (100%)

Evidence: 2 of 2 sampled articles have dateModified equal to datePublished

Why it matters: Time-sensitive content looks unmaintained without a genuine update date.

How to fix: Show a visible "Last reviewed" date and update dateModified only after real edits.

Affected pages:

<https://northwind-erp.com/blog/odoo-vs-dynamics/>

<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

Medium Raw formatting code visible on the page (LaTeX)

Whole website

Evidence: 2 page(s) show symbols like $\$ge\$$

Why it matters: Visible code looks unprofessional and breaks the most quotable passages.

How to fix: Replace with plain characters such as $\geq, \leq, <, >$.

Affected pages:

<https://northwind-erp.com/blog/odoo-vs-dynamics/>

<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

Medium Authoring artifacts in headings

Whole website

Evidence: Headings start with "H4:" or similar on 2 page(s)

Why it matters: Leftover drafting labels show in the page, table of contents and anchor links.

How to fix: Remove the "H2:/H3:/H4:" prefixes from headings.

Affected pages:

<https://northwind-erp.com/blog/odoo-vs-dynamics/>

<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

Medium Unknown severity finding

Whole website

Evidence: x

Why it matters: y

How to fix: z

Medium Pages with duplicate content

Whole website

Evidence: 2 pages with duplicate content

Why it matters: Near-identical pages compete with each other and dilute ranking signals.

How to fix: Consolidate duplicates with a canonical tag or a 301 redirect, or make each page substantively different.

Medium Thin content (under 300 words)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Very short pages rarely answer the searcher fully and struggle to rank.

How to fix: Add specific, useful information: process, pricing factors, examples, FAQs.

Affected pages:

<https://northwind-erp.com/services/> — 180 words

Low Light content (300-500 words)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Commercial pages usually need more depth to compete.

How to fix: Expand with answers to the questions buyers ask before contacting you.

Affected pages:

<https://northwind-erp.com/industries/food-distribution/> — 420 words

7. Performance & Core Web Vitals

Domain	Mobile score	LCP	CLS	INP (real users)	TBT	Server response
northwind-erp.com (you)	41	3.90s	0.14	260ms	820ms	910ms
gulferp.ae	78	2.10s	0.04	120ms	820ms	910ms
erpmasters.com	78	2.10s	0.04	120ms	820ms	910ms

Biggest Speed Savings (your homepage)

- Eliminate render-blocking resources — about 1,210ms
- Efficiently encode images — about 640ms

Findings

High Slow server response (TTFB)

Whole website

Evidence: Homepage server wait time 950ms (good is under 200ms)

Why it matters: A slow first byte delays everything else and hurts LCP.

How to fix: Enable CDN/edge caching and host close to your main audience.

High Low mobile performance score

Whole website

Evidence: PageSpeed 41/100 (mobile)

Why it matters: A low score signals heavy, slow pages on phones.

How to fix: Fix the top opportunities listed below.

Affected pages:

<https://northwind-erp.com/>

High Mobile speed is well behind competitors

Whole website

Evidence: PageSpeed 41 vs competitor median 78

Why it matters: Faster competitor pages give them a user-experience and ranking edge.

How to fix: Prioritise caching, image optimisation and JavaScript reduction.

Affected pages:

<https://northwind-erp.com/>

High Very slow Largest Contentful Paint (over 4s)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: LCP over 4 seconds is rated Poor by Google and hurts rankings and conversions.

How to fix: Optimise the main image, enable caching, reduce blocking scripts.

Affected pages:

<https://northwind-erp.com/> — 4500ms (lab)

Medium Largest Contentful Paint needs improvement (2.5-4s)

Whole website

Evidence: 3900ms (real users, mobile)

Why it matters: Google rates LCP above 2.5 seconds as Needs Improvement.

How to fix: Speed up server response and optimise the main image.

Affected pages:

<https://northwind-erp.com/>

Medium Layout shift needs improvement (CLS 0.1-0.25)

Whole website

Evidence: CLS 0.14

Why it matters: Visible layout shifts hurt user experience.

How to fix: Set width/height on images and reserve space for dynamic content.

Affected pages:

<https://northwind-erp.com/>

Medium Response to clicks needs improvement (INP 200-500ms)

Whole website

Evidence: INP 260ms (real users)

Why it matters: Slow interactions hurt experience.

How to fix: Reduce long JavaScript tasks.

Affected pages:

<https://northwind-erp.com/>

Medium Slow server response in Lighthouse test

Whole website

Evidence: 910ms server response

Why it matters: The first byte arrives slowly, delaying everything else.

How to fix: Enable HTML caching at the CDN and host close to your audience.

Affected pages:

<https://northwind-erp.com/>

Medium Heavy JavaScript blocks the page

Whole website

Evidence: Total Blocking Time 820ms

Why it matters: Long scripts freeze the page after it appears.

How to fix: Defer third-party tags and split large scripts.

Affected pages:

<https://northwind-erp.com/>

Medium Slow Largest Contentful Paint (2.5-4s)

9 of 14 pages (64%)

Evidence: 9 of 14 crawled pages

Why it matters: Google rates LCP above 2.5 seconds as Needs Improvement.

How to fix: Preload the main image and speed up server response.

Affected pages:

<https://northwind-erp.com/services/data-migration/> — 2600ms (lab)

<https://northwind-erp.com/industries/food-distribution/> — 2700ms (lab)

<https://northwind-erp.com/about/> — 2800ms (lab)

<https://northwind-erp.com/contact/> — 2900ms (lab)

<https://northwind-erp.com/privacy-policy/> — 3000ms (lab)

<https://northwind-erp.com/careers/> — 3100ms (lab)

<https://northwind-erp.com/blog/> — 3200ms (lab)

<https://northwind-erp.com/blog/erp-implementation-cost-guide/> — 3300ms (lab)

<https://northwind-erp.com/blog/odoo-vs-dynamics/> — 3400ms (lab)

Medium Render-blocking CSS/JavaScript

5 of 14 pages (36%)

Evidence: 5 of 14 crawled pages

Why it matters: The browser must wait for these files before showing the page, slowing first paint.

How to fix: Defer non-critical JavaScript and inline critical CSS.

Affected pages:

<https://northwind-erp.com/>

<https://northwind-erp.com/services/odoo-erp/>

<https://northwind-erp.com/industries/food-distribution/>

<https://northwind-erp.com/privacy-policy/>
<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

Medium Broken images, scripts or stylesheets

Whole website

Evidence: 2 broken resources referenced

Why it matters: Missing resources cause layout breakage and slow the page while the browser waits.

How to fix: Fix or remove references to resources that return errors.

Medium Layout shift above 0.1 (CLS)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Content jumping while loading annoys users and fails Core Web Vitals.

How to fix: Set width/height on images and reserve space for embeds and banners.

Affected pages:

<https://northwind-erp.com/> — CLS 0.18

Medium Slow server response on individual pages (over 800ms)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Slow first byte delays everything else.

How to fix: Enable caching for these pages and check heavy server-side work.

Affected pages:

<https://northwind-erp.com/> — 950ms

Medium Large image payload (over 1MB of images per page)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Large images are the most common cause of slow mobile pages. The figure is the total size of image files the page references (including responsive sizes), so the real download may be smaller, but it signals unoptimised images.

How to fix: Compress images, serve WebP/AVIF, and make sure image CDN optimisation (e.g. `f_auto,q_auto`) is on.

Affected pages:

<https://northwind-erp.com/> — 2.3MB of image files referenced

Low No speculation rules for instant navigation

Whole website

Evidence: No <script type="speculationrules"> found

Why it matters: Prefetching likely next pages makes navigation feel instant.

How to fix: Add conservative speculation rules for key pages (e.g. contact and top services).

Low Top speed-up opportunities

Whole website

Evidence: Eliminate render-blocking resources (~1210ms); Efficiently encode images (~640ms)

Why it matters: Google lists these as the biggest savings available.

How to fix: Work through these in order of estimated savings.

Affected pages:

<https://northwind-erp.com/>

Low Slow to become interactive (over 5s)

11 of 14 pages (79%)

Evidence: 11 of 14 crawled pages

Why it matters: Heavy JavaScript makes the page unresponsive after it appears.

How to fix: Reduce and defer JavaScript.

Affected pages:

<https://northwind-erp.com/services/odoo-erp/> — 5100ms

<https://northwind-erp.com/services/dynamics-365-business-central/> — 5400ms

<https://northwind-erp.com/services/data-migration/> — 5700ms

<https://northwind-erp.com/industries/food-distribution/> — 6000ms

<https://northwind-erp.com/about/> — 6300ms

<https://northwind-erp.com/contact/> — 6600ms

<https://northwind-erp.com/privacy-policy/> — 6900ms

<https://northwind-erp.com/careers/> — 7200ms

<https://northwind-erp.com/blog/> — 7500ms

<https://northwind-erp.com/blog/erp-implementation-cost-guide/> — 7800ms

...and 1 more

8. AI Search Visibility

What AI Assistants Say (live answers)

Assistant	Question	Mentions you	Providers named	Sources cited
ChatGPT (web search on)	What is Northwind ERP (northwind-erp.com)? What does the company do, where is it based and who is it for? Answer in 3 sentences. If you cannot find it, say exactly: I could not find this company.	Yes	northwind-erp.com	northwind-erp.com
ChatGPT (web search on)	I need to choose a provider. Which are the best erp software dubai company United Arab Emirates? Give me up to 8 companies with their website domains, best first, one line each.	No	gulferp.ae, erpmasters.com, cloudledger.io, sapconsult.ae, clutch.co	clutch.co
Perplexity	I need to choose a provider. Which are the best erp software dubai company United Arab Emirates? Give me up to 8 companies with their website domains, best first, one line each.	No data (Access denied. AI Optimization API is not active.)	—	—

ChatGPT (web search on) — about the company:

Northwind ERP (northwind-erp.com) is a Dubai-based ERP implementation partner that deploys Odoo and Microsoft Dynamics 365 Business Central for wholesalers and distributors in the UAE. It serves mid-sized distribution businesses.

ChatGPT (web search on) — recommendation:

1. GulfERP - gulferp.ae 2. ERP Masters - erpmasters.com 3. CloudLedger - cloudledger.io 4. SAP Consult - sapconsult.ae

Google index estimate (site: search): 31 URLs vs 14 pages crawled. Confirm the exact figure in Search Console.

Google Results & AI Overviews

Search	AI Overview	You cited	Competitors cited	Your position	Competitor positions
northwind erp (brand)	No	No	—	#1	gulferp.ae: — erpmasters.com: —
best erp software dubai company united arab emirates (category)	Yes	No	gulferp.ae	#14	gulferp.ae: #2 erpmasters.com: #3
erp software dubai (top keyword)	Yes	No	gulferp.ae	#14	gulferp.ae: #2 erpmasters.com: #3

AI assistant checks are live answers from ChatGPT (web search on) and Perplexity via the DataForSEO LLM Responses API; each run may differ slightly. Google AI Overview data comes from a live search.

Findings

High Some search and AI crawlers are blocked or get less content

Whole website

Evidence: ClaudeBot (403); PerplexityBot (200, 2% of content)

Why it matters: Blocked crawlers cannot index or cite your pages in search and AI answers.

How to fix: Check firewall, bot-protection and CDN rules so these crawlers receive the same page as browsers.

High ChatGPT recommends other providers, not you

Whole website

Evidence: For "I need to choose a provider. Which are the best erp software dubai company United Arab Emirates? Give me up to 8 compani..." ChatGPT listed: gulferp.ae, erpmasters.com, cloudledger.io, sapconsult.ae, clutch.co (including competitors gulferp.ae, erpmasters.com)

Why it matters: Buyers increasingly ask AI assistants for shortlists; not being named means not being considered.

How to fix: Get listed where AI answers draw their sources: the directories and review sites cited (clutch.co), plus comparison and "best X" pages that name you.

High Competitors are cited in Google AI Overviews, you are not

Whole website

Evidence: "best erp software dubai company united arab emirates": AI Overview cites gulferp.ae; "erp software dubai": AI Overview cites gulferp.ae

Why it matters: AI Overviews sit above normal results and take clicks; competitors named there are shortlisted before you are seen.

How to fix: Publish clear, well-sourced 40-70 word answer blocks on these topics, use question-style headings, and strengthen entity signals (Organization schema, consistent profiles).

Medium robots.txt blocks some AI crawlers

Whole website

Evidence: Blocked: gptbot, ccbot

Why it matters: Blocked AI crawlers cannot use your pages as sources in AI answers. This can be intentional, so confirm it is a business decision.

How to fix: Allow search-related AI crawlers (e.g. OAI-SearchBot, PerplexityBot) if you want to be cited in AI answers.

Low No llms.txt file

Whole website

Evidence: <https://northwind-erp.com/llms.txt> returned 404

Why it matters: llms.txt gives AI tools a clean summary of your site. Google does not use it; it is a low-cost extra for AI agents, not a ranking lever.

How to fix: Optionally publish /llms.txt with a short site summary and links to your key pages.

9. Structured Data (Schema)

Score: 43/100

High Invalid structured data (JSON-LD will not parse)

Whole website

Evidence: 1 broken JSON-LD block(s) on sampled pages

Why it matters: Search engines ignore structured data that cannot be parsed.

How to fix: Validate the markup with Google Rich Results Test and fix syntax errors.

Affected pages:

<https://northwind-erp.com/services/odoo-erp/>

High Malformed sameAs profile link

Whole website

Evidence: Invalid: <https://twitter.com/northwind erp>

Why it matters: A broken identity link is worse than none: it confuses entity matching in Google and AI systems.

How to fix: Remove or correct the invalid entry and link only real, active profiles.

High Structured contact details are thinner than what the site shows

Whole website

Evidence: Missing in schema: streetAddress, email

Why it matters: Search engines cannot match your business listing to your site when the address and phone in schema are incomplete.

How to fix: Add full PostalAddress (streetAddress, addressLocality, addressRegion, postalCode, addressCountry), telephone and email to Organization schema.

High Service pages have no Service schema

5 of 14 pages (100%)

Evidence: 5 of 5 sampled service pages

Why it matters: Service schema tells search engines exactly what you offer, where and by whom, and separates similar service pages.

How to fix: Add Service JSON-LD (serviceType, provider → Organization @id, areaServed) on each service page.

Affected pages:

<https://northwind-erp.com/services/>
<https://northwind-erp.com/services/erp-implementation/>
<https://northwind-erp.com/services/odoo-erp/>
<https://northwind-erp.com/services/dynamics-365-business-central/>
<https://northwind-erp.com/services/data-migration/>

High Article publisher logo URL is broken

Whole website

Evidence: <https://northwind-erp.com/missing-logo.png> returned 404

Why it matters: A broken schema logo breaks Google logo and organisation rich results, and is usually repeated on every page from one template.

How to fix: Point the schema to a working image URL (ImageObject with width and height). Verify: the URL should return 200.

Medium Few verified profiles linked in sameAs

Whole website

Evidence: 1 valid sameAs link(s): <https://www.linkedin.com/company/northwind-erp>,
https://twitter.com/northwind_erp

Why it matters: Entity recognition works best with 4-6 independent profiles (LinkedIn, directories, Wikidata, Crunchbase, review sites).

How to fix: Add sameAs links to every real business profile.

Medium No BreadcrumbList schema

4 of 14 pages (44%)

Evidence: 4 of 9 sampled inner pages

Why it matters: Breadcrumbs show site hierarchy in search results and help search engines understand structure.

How to fix: Add BreadcrumbList JSON-LD to every inner page.

Affected pages:

<https://northwind-erp.com/contact/>
<https://northwind-erp.com/services/odoo-erp/>
<https://northwind-erp.com/blog/odoo-vs-dynamics/>
<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

Low No alternateName in Organization schema

Whole website

Evidence: alternateName missing

Why it matters: Helps search engines and AI map spelling variants of the brand to one entity.

How to fix: Add alternateName with common variants of the brand name.

Low Organization schema has no @id

Whole website

Evidence: @id missing

Why it matters: An @id lets other schema (Service, Article) reference the same organisation cleanly.

How to fix: Add "@id": "https://northwind-erp.com/#organization".

Schema Found on Sampled Pages

Page	Type	Schema types
https://northwind-erp.com/	home	Organization
https://northwind-erp.com/contact/	contact	none
https://northwind-erp.com/about/	about	BreadcrumbList
https://northwind-erp.com/services/	service	BreadcrumbList
https://northwind-erp.com/services/erp-implementation/	service	BreadcrumbList
https://northwind-erp.com/services/odoo-erp/	service	none
https://northwind-erp.com/services/dynamics-365-business-central/	service	BreadcrumbList
https://northwind-erp.com/services/data-migration/	service	BreadcrumbList
https://northwind-erp.com/blog/odoo-vs-dynamics/	article	BlogPosting
https://northwind-erp.com/blog/erp-implementation-cost-guide/	article	BlogPosting

10. Crawlability & Indexing

Score: 42/100

Critical Broken pages (4xx, 5xx or timeout)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Pages that return errors waste crawl budget and lose any ranking signals pointing to them.

How to fix: Fix or 301-redirect broken URLs to the most relevant live page.

Affected pages:

<https://northwind-erp.com/careers/>

High www and non-www versions are not consolidated

Whole website

Evidence: Crawler canonicalization test failed

Why it matters: If both versions do not resolve to one canonical host, links and signals are split.

How to fix: Make the www version redirect (301) to the main domain with a valid certificate for both hostnames.

High Orphan pages (no crawlable internal links)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: These pages are only discoverable through the sitemap. They get little internal authority and are crawled less. Often caused by cards or buttons built without real <a href> links.

How to fix: Link to these pages with normal <a href> links from relevant hub pages and menus.

Affected pages:

<https://northwind-erp.com/industries/food-distribution/>

Medium Broken internal links

Whole website

Evidence: 3 broken links across 14 pages

Why it matters: Links to pages that no longer exist waste crawl budget and send users to dead ends.

How to fix: Export the broken links from the crawl and fix or remove each one; redirect deleted pages to the closest live page.

Medium Missing canonical tag

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Without a canonical, duplicate URL versions can compete with each other.

How to fix: Add a self-referencing canonical tag to every indexable page.

Affected pages:

<https://northwind-erp.com/privacy-policy/> — No canonical

Medium Pages buried deep in the site (3+ clicks from home)

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Deep pages get crawled less often and receive less internal authority.

How to fix: Link to them from the homepage, menus or hub pages.

Affected pages:

<https://northwind-erp.com/blog/erp-implementation-cost-guide/> — 5 clicks deep

Low Crawled pages that are not indexable

2 of 14 pages (14%)

Evidence: 2 non-indexable pages — reasons: meta_robots_noindex (1), canonical (1)

Why it matters: Often intentional (noindex, canonicals to other pages), but every important page in this list is invisible to Google.

How to fix: Confirm each non-indexable page is meant to be excluded; remove noindex/canonical rules from pages that should rank.

Affected pages:

<https://northwind-erp.com/thank-you/> — meta_robots_noindex

<https://northwind-erp.com/tag/erp/> — canonical

Low Indexable pages missing from the sitemap

2 of 14 pages (14%)

Evidence: 2 live pages are not in sitemap.xml

Why it matters: Search engines rely on the sitemap to discover and prioritise pages.

How to fix: Add these URLs to the sitemap, or noindex them if they should not rank.

Affected pages:

<https://northwind-erp.com/blog/erp-implementation-cost-guide/>

<https://northwind-erp.com/blog/odoo-vs-dynamics/>

Low Few internal links pointing to the page

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Pages with few internal links look less important to search engines.

How to fix: Add contextual links from related pages with descriptive anchor text.

Affected pages:

<https://northwind-erp.com/blog/odoo-vs-dynamics/> — 1 internal links in

Info Key pages canonicalise to a different URL

Whole website

Evidence: <https://northwind-erp.com/services/odoo-erp/> → <https://northwind-erp.com/services/>

Why it matters: Fine if intentional, but these pages will not rank on their own URL.

How to fix: Confirm each canonical is intended.

Affected pages:

<https://northwind-erp.com/services/odoo-erp/>

11. On-Page SEO

Score: 70/100

High Missing H1 heading

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: The H1 tells users and search engines what the page is about.

How to fix: Add one clear H1 per page that includes the page topic.

Affected pages:

<https://northwind-erp.com/services/odoo-erp/>

Medium Missing meta description

4 of 14 pages (29%)

Evidence: 4 of 14 crawled pages

Why it matters: Google writes its own snippet, often less compelling, lowering click-through rate.

How to fix: Write a unique 140-155 character description with a clear call to action.

Affected pages:

<https://northwind-erp.com/services/>

<https://northwind-erp.com/services/data-migration/>

<https://northwind-erp.com/privacy-policy/>

<https://northwind-erp.com/blog/odoo-vs-dynamics/>

Medium Duplicate page titles across the site

3 of 14 pages (21%)

Evidence: 1 title(s) reused on 3 pages

Why it matters: Pages sharing a title look interchangeable to search engines and compete for the same query.

How to fix: Give every page a unique title that names its specific topic.

Affected pages:

"Page 1 | Northwind ERP" (3 pages): <https://northwind-erp.com/a>, <https://northwind-erp.com/b>
...and 2 more

Medium Brand name repeated in the title

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: A doubled brand suffix wastes title space and usually means the template adds the brand twice.

How to fix: Fix the title template so the brand appears once.

Affected pages:

<https://northwind-erp.com/services/data-migration/> — "Data Migration Services for Distributors in the UAE and GCC Region | Northwind ERP | Northwind ERP"

Medium More than one H1 on the page

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Multiple H1s blur what the page is mainly about.

How to fix: Keep one H1; turn the others into H2s.

Affected pages:

<https://northwind-erp.com/services/dynamics-365-business-central/> — 2 H1 tags

Low Homepage H1 does not name the business or what it does

Whole website

Evidence: Homepage H1: "ERP Implementation for Distributors"

Why it matters: The homepage H1 is the strongest on-page signal of who you are, what you sell and where.

How to fix: Rewrite the H1 to name the brand, the service category and the location.

Affected pages:

<https://northwind-erp.com/>

Low Title shorter than 30 characters

13 of 14 pages (93%)

Evidence: 13 of 14 crawled pages

Why it matters: Short titles waste space to include keywords and a reason to click.

How to fix: Expand to 50-60 characters with the main keyword and benefit.

Affected pages:

<https://northwind-erp.com/> — 22 characters: "Page 0 | Northwind ERP"

<https://northwind-erp.com/services/> — 22 characters: "Page 1 | Northwind ERP"

<https://northwind-erp.com/services/erp-implementation/> — 3 characters: "ERP"

<https://northwind-erp.com/services/odoo-erp/> — 22 characters: "Page 3 | Northwind ERP"

<https://northwind-erp.com/services/dynamics-365-business-central/> — 22 characters: "Page 4 | Northwind ERP"

<https://northwind-erp.com/industries/food-distribution/> — 22 characters: "Page 6 | Northwind ERP"

<https://northwind-erp.com/about/> — 22 characters: "Page 7 | Northwind ERP"

<https://northwind-erp.com/contact/> — 22 characters: "Page 8 | Northwind ERP"

<https://northwind-erp.com/privacy-policy/> — 22 characters: "Page 9 | Northwind ERP"

<https://northwind-erp.com/careers/> — 23 characters: "Page 10 | Northwind ERP"
...and 3 more

Low Missing Open Graph tags

7 of 14 pages (50%)

Evidence: 7 of 14 crawled pages

Why it matters: Without them, links shared on LinkedIn, WhatsApp or Facebook show a poor preview.

How to fix: Add og:title, og:description and og:image.

Affected pages:

<https://northwind-erp.com/> — Missing og:title, og:image

<https://northwind-erp.com/services/erp-implementation/> — Missing og:title, og:image

<https://northwind-erp.com/services/dynamics-365-business-central/> — Missing og:title, og:image

<https://northwind-erp.com/industries/food-distribution/> — Missing og:title, og:image

<https://northwind-erp.com/contact/> — Missing og:title, og:image

<https://northwind-erp.com/careers/> — Missing og:title, og:image

<https://northwind-erp.com/blog/erp-implementation-cost-guide/> — Missing og:title, og:image

Low Duplicate meta descriptions across the site

4 of 14 pages (29%)

Evidence: 1 description(s) reused on 4 pages

Why it matters: Reused descriptions lower click-through and signal templated, low-effort pages.

How to fix: Write a unique description for each important page; leave it empty on pages that are not meant to rank rather than duplicating.

Affected pages:

"A meta description of the page that explains....." (4 pages)

...and 3 more

Low Title longer than 60 characters

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Long titles get cut off in search results.

How to fix: Keep the important words in the first 60 characters.

Affected pages:

<https://northwind-erp.com/services/data-migration/> — 98 characters

Low Meta description shorter than 70 characters

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Too short to persuade searchers to click.

How to fix: Write 140-155 characters with a clear benefit and call to action.

Affected pages:

<https://northwind-erp.com/contact/> — 10 characters

Low Heading order skips a level

1 of 14 pages (7%)

Evidence: 1 of 14 crawled pages

Why it matters: Skipping from H1 to H3 breaks the outline that search engines and screen readers use.

How to fix: Use H2 before H3, in a logical order.

Affected pages:

<https://northwind-erp.com/about/> — H3 used without any H2

Info Missing Twitter/X card tags

7 of 14 pages (50%)

Evidence: 7 of 14 crawled pages

Why it matters: Shared links on X show a plain preview.

How to fix: Add twitter:card and twitter:image tags.

Affected pages:

<https://northwind-erp.com/> — No twitter:card

<https://northwind-erp.com/services/erp-implementation/> — No twitter:card

<https://northwind-erp.com/services/dynamics-365-business-central/> — No twitter:card

<https://northwind-erp.com/industries/food-distribution/> — No twitter:card

<https://northwind-erp.com/contact/> — No twitter:card

<https://northwind-erp.com/careers/> — No twitter:card

<https://northwind-erp.com/blog/erp-implementation-cost-guide/> — No twitter:card

12. Images, Security & Technical

Images — 88/100

Medium Main homepage image has empty alt text

Whole website

Evidence: First image on the homepage: /hero.jpg

Why it matters: The main image is usually the LCP element and carries meaning; empty alt loses context for search and accessibility.

How to fix: Write descriptive alt text for the hero image.

Affected pages:

<https://northwind-erp.com/>

Medium Images without width and height

Whole website

Evidence: 4 images on sampled pages lack explicit dimensions

Why it matters: Images without reserved space can shift the layout while loading (CLS).

How to fix: Add width and height (or aspect-ratio) to every image.

Affected pages:

<https://northwind-erp.com/>

Security — 93/100

Medium Mixed content (HTTP resources on HTTPS pages)

1 of 14 pages (10%)

Evidence: 1 http:// resources referenced on 1 sampled pages

Why it matters: Browsers block or warn about insecure resources, which can break layout and scripts and undermines trust.

How to fix: Reference every image, script and stylesheet over https://.

Affected pages:

<https://northwind-erp.com/>

Low Missing security headers

Whole website

Evidence: Not found: Content-Security-Policy, X-Frame-Options, Referrer-Policy

Why it matters: Security headers protect visitors. They are not a direct ranking factor but show a well-maintained site.

How to fix: Add the missing headers in your hosting or CDN configuration; start Content-Security-Policy in Report-Only mode.

Technical — 93/100

Medium Contact form is not in the server-rendered HTML

Whole website

Evidence: Raw HTML of <https://northwind-erp.com/contact/> has 0 `<form>` and 0 `<input>` elements

Why it matters: Crawlers and AI agents that do not run JavaScript see no way to contact you.

How to fix: Server-render the form (fields, labels, submit) or add a `<noscript>` fallback form.

Affected pages:

<https://northwind-erp.com/contact/>

13. What Works Well

- Valid SSL certificate on the main domain (expires 2026-10-20)
- HTTP correctly redirects to HTTPS
- robots.txt is present
- HTTP/2 is enabled
- Missing pages return a proper 404
- No redirect loops
- Every page has a title tag
- www redirects to the main domain (301)
- HTTP redirects to HTTPS
- HTML is cacheable (Cache-Control: public, max-age=0, must-revalidate)
- robots.txt lists the sitemap
- XML sitemap lists 12 URLs
- Structured data present on the homepage (Organization)
- Organization schema found (Organization)
- Organization logo loads correctly (200)
- Ranks in the Google top 10 for 1 keywords
- Clear contact details on every page
- ChatGPT (with web search) correctly identifies the company
- Ranks #1 for its brand name
- Google indexes roughly as many pages as the crawl found (31 estimated)

14. Action Plan

Phase 1 — Fix the foundations (Week 1)

- Broken pages (4xx, 5xx or timeout) [Critical]
- www and non-www versions are not consolidated [High]
- Slow server response (TTFB) [High]
- Invalid structured data (JSON-LD will not parse) [High]
- Malformed sameAs profile link [High]
- Structured contact details are thinner than what the site shows [High]
- Service pages have no Service schema [High]
- Article publisher logo URL is broken [High]
- Low mobile performance score [High]
- Mobile speed is well behind competitors [High]
- Orphan pages (no crawlable internal links) [High]
- Very slow Largest Contentful Paint (over 4s) [High]

Phase 2 — Content and on-page (Weeks 2-5)

- Experience claim conflicts with the founding date [High]
- Articles have no named human author [High]
- Articles cite no external sources [High]
- Experience claim contradicts founding date [High]
- No named authors on articles [High]
- Missing H1 heading [High]
- Few verified profiles linked in sameAs [Medium]
- No freshness signal on articles [Medium]
- Main homepage image has empty alt text [Medium]
- Images without width and height [Medium]
- Raw formatting code visible on the page (LaTeX) [Medium]
- Authoring artifacts in headings [Medium]
- Unknown severity finding [Medium]
- No BreadcrumbList schema [Medium]
- Missing meta description [Medium]
- Duplicate page titles across the site [Medium]
- Pages with duplicate content [Medium]
- Brand name repeated in the title [Medium]
- More than one H1 on the page [Medium]
- Thin content (under 300 words) [Medium]

Phase 3 — Authority, keywords and AI visibility (run in parallel) (Weeks 2-12)

- Some search and AI crawlers are blocked or get less content [High]

- The site does not rank in Google's top 10 for any keyword [High]
- Organic traffic is under 10% of competitors [High]
- Very young domain competing with long-established sites [High]
- Keyword gap: searches competitors win and you do not [High]
- Far fewer referring domains than competitors [High]
- ChatGPT recommends other providers, not you [High]
- Competitors are cited in Google AI Overviews, you are not [High]
- robots.txt blocks some AI crawlers [Medium]
- High backlink spam score [Medium]
- Link opportunities: sites that link to competitors but not to you [Medium]
- No llms.txt file [Low]
- Low-difficulty keywords you can target now [Low]
- Keywords close to page 1 (positions 11-20) [Low]
- Most links are nofollow [Low]
- Backlinks pointing to broken pages [Low]

Phase 4 — Polish (Months 2-3)

- Contact form is not in the server-rendered HTML [Medium]
- Largest Contentful Paint needs improvement (2.5-4s) [Medium]
- Layout shift needs improvement (CLS 0.1-0.25) [Medium]
- Response to clicks needs improvement (INP 200-500ms) [Medium]
- Slow server response in Lighthouse test [Medium]
- Heavy JavaScript blocks the page [Medium]
- Slow Largest Contentful Paint (2.5-4s) [Medium]
- Render-blocking CSS/JavaScript [Medium]
- Broken internal links [Medium]
- Broken images, scripts or stylesheets [Medium]
- Mixed content (HTTP resources on HTTPS pages) [Medium]
- Missing canonical tag [Medium]
- Pages buried deep in the site (3+ clicks from home) [Medium]
- Layout shift above 0.1 (CLS) [Medium]
- Slow server response on individual pages (over 800ms) [Medium]
- Large image payload (over 1MB of images per page) [Medium]
- Missing security headers [Low]
- No alternateName in Organization schema [Low]
- Organization schema has no @id [Low]
- Homepage H1 does not name the business or what it does [Low]
- No speculation rules for instant navigation [Low]
- Top speed-up opportunities [Low]
- Title shorter than 30 characters [Low]
- Slow to become interactive (over 5s) [Low]
- Missing Open Graph tags [Low]
- Duplicate meta descriptions across the site [Low]

- Crawled pages that are not indexable [Low]
- Indexable pages missing from the sitemap [Low]
- Title longer than 60 characters [Low]
- Meta description shorter than 70 characters [Low]
- Heading order skips a level [Low]
- Light content (300-500 words) [Low]
- Few internal links pointing to the page [Low]

15. Leading Indicators to Track

- SEO Health Score on the next audit (now 55/100)
- Keywords in Google top 10 (now 1, competitor median 122)
- Rankings for the easy-win keywords listed in section 4
- Referring domains (now 9, competitor median 310)
- Mobile PageSpeed score (now 41)
- Whether ChatGPT and Perplexity name you for category queries, and whether Google AI Overviews cite you
- Position for your brand name in Google

16. Methodology & Data Sources

Full SEO health. Each category starts at 100. Findings written by the AI content review, and notes about data that could not be collected, are listed but do not change the score. Each other finding deducts Critical 30, High 15, Medium 7, Low 3, Info 1 points, scaled by the share of pages affected (60%-100% of the penalty); site-wide issues take the full penalty. Within a category, each further finding of the same severity counts 70% of the previous one, so many small issues cannot zero a category on their own. The score is the weighted average of category scores, capped at 70 with one critical issue, 60 with two or more, and 85 with five or more high-priority issues.

Severity	Points deducted
Critical	30
High	15
Medium	7
Low	3
Info	1

Source	Used for
DataForSEO On-Page crawl	Page-level technical and on-page checks (up to 200 pages incl. sitemap)
Direct HTTP and HTML checks	www/HTTPS, caching, headers, robots.txt, sitemap, llms.txt, schema, forms, images
DataForSEO Labs	Competitors, rankings, traffic estimates, keyword ideas by intent, keyword gap
DataForSEO Backlinks	Backlinks, referring domains, link gap
Google PageSpeed Insights	Lighthouse lab data and real-user Core Web Vitals (mobile)
Google search results (live)	Brand and category rankings, AI Overview citations, competitor discovery
AI content review (Claude)	Content quality and E-E-A-T review of sampled pages (listed, not scored)
DataForSEO LLM Responses	Live ChatGPT (web search) and Perplexity answers about the brand and category
DataForSEO On-Page reports	Duplicate titles/descriptions, non-indexable pages, redirect chains
Domain registry data	Domain registration date

AI crawler checks use the crawler user-agent only; real crawlers are also verified by IP, so a pass here means no user-agent based blocking.

Some extra crawl reports were unavailable: redirect_chains: Not Found.

Only 14 of 58 crawled pages were analysed in detail.
